Now in paperback, the Oxford Textbook of Oncology reflects current best practice in the multidisciplinary management of cancer, written and edited by internationally recognised leaders in the field. Structured in six sections, the book provides an accessible scientific basis to the key topics of oncology, examining how cancer cells grow and function, as well as discussing the aetiology of cancer, and the general principles governing modern approaches to oncology treatment. The book examines the challenges presented by the treatment of cancer on a larger scale within population groups, and the importance of recognising and supporting the needs of individual patients, both during and after treatment. A series of disease-oriented, case-based chapters, ranging from acute leukaemia to colon cancer, highlight the various approaches available for managing the cancer patient, including the translational application of cancer science in order to personalise treatment. The advice imparted in these cases has relevance worldwide, and reflects a modern approach to cancer care. The Oxford Textbook of Oncology provides a comprehensive account of the multiple aspects of best practice in the discipline, making it an indispensable resource for oncologists of all grades and subspecialty interests.

Haematology Nursing Oxford University Press

This fully illustrated text is an essential guide for trainees in Haematology and Medicine studying for higher examinations, as well as for professionals wishing to expand their knowledge or revalidate. The book contains over 100 illustrated cases covering the whole field of malignant and non-malignant haematology, including coagulation problems and infectious diseases. Each case contains a set of questions written by two Royal College examiners, with answers on the reverse page. Readers can make differential diagnoses and devise treatment plans and prognoses, before turning the page to read the experts' detailed answers. The cases are presented in random order – just as they would be in real life – and are of varying lengths and degrees of difficulty, accompanied by hundreds of colour photomicrographs, photographs, and x-rays. This new edition is revised and updated, with new cases, images, and tables.

In an ageing population, geriatric medicine has become central to general practice, and to emergency and general internal medicine in the hospital setting. Diseases are more common in the older person, and can be particularly difficult to assess and to treat effectively in a field that has limited evidence, yet makes up a substantial proportion of the work of most clinicians. Fully updated, this second edition of the Oxford Handbook of Geriatric Medicine includes all the information required to deliver effective geriatric care. Guidance is given on a range of key treatment

areas, indicating where practice differs from that of younger adults or is ill informed by evidence, where dangers lurk for the inexperienced clinician, and on the many ethical and clinical dilemmas common in geriatric practice. This accessible handbook is essential reading for all junior doctors and specialist trainees in geriatric medicine and general internal medicine, and for all medical and nursing staff who manage older people.

Clinical Haematology

An excellent companion to Rodak's Hematology: Clinical Principles & Applications, this atlas is ideal for helping you accurately identify cells at the microscope. It offers complete coverage of the basics of hematologic morphology, including examination of the peripheral blood smear, basic maturation of the blood cell lines, and discussions of a variety of clinical disorders. Over 400 photomicrographs, schematic diagrams, and electron micrographs visually clarify hematology from normal cell maturation to the development of various pathologies. Normal Newborn Peripheral Blood Morphology chapter covers the unique normal cells found in neonatal blood. A variety of high-quality schematic diagrams, photomicrographs, and electron micrographs visually reinforce your understanding of hematologic cellular morphology. Spiral binding and compact size make this book easy to use in a laboratory setting. Coverage of common cytochemical stains, along with a summary chart for interpretation, aids in classifying malignant and benign leukoproliferative disorders. Morphologic abnormalities are presented in chapters on erythrocytes and leukocytes, along with a schematic description of each cell, to provide correlations to various disease states. Body Fluids chapter covers the other

fluids found in the body besides blood, using images from cytocentrifuged specimens. Updated information on the subtypes of chronic lymphocytic leukemia (CLL) helps you recognize variant forms of CLL you may encounter in the lab.
